

TAD Edge			
Edge = (from, to, weight)			
from $\neq$ null $\wedge$ to $\neq$ null $\wedge$ weight > 0			
Primitive Operations			
Operation	Input	Input	Type
getFrom	—	T	Observer
getTo	—	T	Observer
getWeight	—	int	Observer

$\langle \text{getFrom}() \rangle$
Returns the from value of the edge
Precondition: —
Postcondition: returns from

$\langle \text{getDestination}() \rangle$
Returns the to value of the edge
Precondition: —
Postcondition: returns to

$\langle \text{getWeight}() \rangle$
Returns the weight of the edge
Precondition: —
Postcondition: returns weight $\in \mathbb{N}^+$
